

I have studied the test results done by the ARRL relative to Power Line Communications (PLC) systems. Their data would clearly indicate there is a significant potential for serious interference generated by these systems to users of the HF part of the radio spectrum even with radiation limits at the present level.

I would encourage the Commission to carefully consider the impact to the Amateur Radio Service and other users of this spectrum before allowing this technology to become widespread.

Thanks,

James M. Keeth, AF9A
